

# Modeling and Evaluating Denial of Service Attacks for Wireless and Mobile Applications (SpringerBriefs)

**BEST DDOS PROTECTION**

**ddoscube**  
Last Step Before a Spoof

Finally, we have a way to put any DDOS to a STOP!  
JUST VIRTUALLY MOVE YOUR SERVER INTO OUR PROTECTED CLOUD!

**SIMPLE**  
We use the simplest PPTP VPN to assign a protected IP address to your device, regardless of OS (Windows, Linux or Mac) or firewall. Just change your DNS, and it's DONE!

**SMART**  
Needed the same block but didn't want to end up with an army of closed blocks and a repetitive layout?  
Flip things around without breaking the consistency of your design!  
Same as above, in this layout, you could write up to 4074 lines of text as long as you break them into paragraphs to help your reader digest it all!

**SAFE**  
Our protected cloud can block up to 250Gbps ALL known types of DDOS attacks, including layer 3, 4, 7 or any TCP SYN, UDP ACK, UDP flood, ICMP attack, etc. The bad traffic will never reach you.

**SPEEDY**  
We utilize several Tbps of total bandwidth worldwide to achieve high-speed, low latency packet filtration. In disabling the VPN encryption, we can improve 20%-50% of network throughput.

The world's most affordable DDOS protection!
